Richard Jones
Bristol,
United Kingdom

Letter of Recommendation

To Whom It May Concern,

This letter certifies that the student, Richard Jones, has successfully completed the challenging MCSI Remote Internship (MRI).

Core skills that Richard has demonstrated a good command of basic levels of proficiency are:

- Performing network vulnerability scans
- Exploiting vulnerabilities with Metasploit
- Identifying and exploiting web application vulnerabilities without tools
- Writing custom offensive security tools to aid Red Teaming operators
- Assessing the security settings of Windows machines and harden them
- Hunting for malware using YARA
- Hunting for threat actors on Windows networks using Python
- Defending web applications against common vulnerabilities

MCSI's uniquely challenging exercises were 100% practical and hands-on. Based on the student's excellent quality of work, we believe that he is now well prepared for a junior position in the cyber security industry.

The following link allows you access to his personal MCSI Portfolio attesting to the quality and type of challenging exercises that have prepared the student in an excellent manner. Therefore, we feel comfortable in recommending him for a junior position from a technical skillset point of view.

For further skills assessment, we suggest that you review Richard's exercise solutions, which include source code, video recordings, Word and PDF documents.

Should you require any further information, please feel free to contact me.

Kindest Regards,
Benjamin Mossé
